QUESTIONS

1. What is your diagnosis?
   a. Toxic epidermal necrolysis.
   b. Thermal burn.
   c. Staphylococcal scalded skin syndrome.
   d. Pemphigus foliaceus.
   e. Fixed drug eruption.
2. Which of the following is true of stress and wound healing?
   b. Stress has been shown to slow healing in mice but not in humans.
   c. Acute but not chronic stress impairs healing.
   d. Wound healing is mediated solely by corticosteroids.
   e. Burn wounds induce elevated catecholamines.

3. Data from Kim et al. suggest which of the following regarding neutrophils is true?
   a. Prolonged neutrophil lifespan delays healing.
   b. Neutrophils persist because of continued migration into the wound.
   c. Blocking adrenergic receptors increases neutrophil presence in wounds.
   d. Blocking neutrophils with antibodies speeds healing in normal, nonstressed wound healing.
   e. IL-6 produced by keratinocytes is the prime driver of neutrophil trafficking.
