Possible role of autophagy in sclerodermatm

Hyaluronan oligosaccharides induce suppressive effect to chronic allergic dermatitis

Recapitulation of ectopic lymphocytes aggregation and B cell phenotype in the skin lesions of patients with pemphigus

Metabolic profiling of psoriasis skin reveals localized cortisol deficiency resulting in maintenance of inflammatory state and disruption of epidermal differentiation

Regulatory T cells drive stem cell differentiation during skin barrier repair

Aggregation of Dsg-specific lymphocytes and antibody production in the lesions of pemphigus vulgaris patients
