**025**

Imiquimod-induced psoriatic inflammation can be attenuated by the application of a Liver X receptor agonist through the production of pro-resolution molecule MOnetsu2, CM Crosby, HK Komori and JW Adams

**026**

The impaired suppressive activity and altered response to IL-33 of regulatory T cells in a psoriasis model may be due to decreased ST2 expression

Etrasimod, an oral, selective sphingosine 1-phosphate receptor modulator improves skin inflammation in a contact hypersensitivity dermatitis model

**027**

IgA plasma levels, but not IgG, against Streptococcus pyogenes identifies Anti-Streptolysin O negative chronic plaque psoriasis patients with increased specific CLA+ T cells IL17A and IL17F producers

**028**

The activation status of nuclear factor B in type 2 conventional dendritic cells before therapy correlates with clinical response to adalimumab

**029**

The IL-31-producing circulating T cells subset represents a unique population of CLA+ CCR7+ CCR4+ effector memory T cells

**030**

Etrasimod, an oral, selective sphingosine 1-phosphate receptor modulator improves skin inflammation in a contact hypersensitivity dermatitis model

CM Crosby, HK Komori and BW Adams
